1. About this document

1.1 Function
This operating instructions manual provides all the information you need for the mounting, set-up and commissioning to ensure the safe operation and disassembly of the safety switchgear. The operating instructions must be available in a legible condition and a complete version in the vicinity of the device.

1.2 Target group: authorised qualified personnel
All operations described in this operating instructions manual must be carried out by trained specialist personnel, authorised by the plant operator only.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

1.3 Explanation of the symbols used

- **Information, hint, note:** This symbol is used for identifying useful additional information.

- **Caution:** Failure to comply with this warning notice could lead to failures or malfunctions.

- **Warning:** Failure to comply with this warning notice could lead to physical injury and/or damage to the machine.

1.4 Appropriate use
The products described in these operating instructions are developed to execute safety-related functions as part of an entire plant or machine. It is the responsibility of the manufacturer of a machine or plant to ensure the correct functionality of the entire machine or plant.

The safety switchgear must be exclusively used in accordance with the versions listed below or for the applications authorised by the manufacturer. Detailed information regarding the range of applications can be found in the chapter "Product description".

1.5 General safety instructions
The user must observe the safety instructions in this operating instructions manual, the country specific installation standards as well as all prevailing safety regulations and accident prevention rules.

Further technical information can be found in the Schmersal catalogues or in the online catalogue on the Internet: www.schmersal.net.

The information contained in this operating instructions manual is provided without liability and is subject to technical modifications. There are no residual risks, provided that the safety instructions as well as the instructions regarding mounting, commissioning, operation and maintenance are observed.

1.6 Warning about misuse

In case of improper use or manipulation of the safety switchgear, personal hazards or damages to machinery or plant components cannot be excluded. The relevant requirements of the standard ISO 14119 must be observed.
1.7 Exclusion of liability
We shall accept no liability for damages and malfunctions resulting from defective mounting or failure to comply with this operating instructions manual. The manufacturer shall accept no liability for damages resulting from the use of unauthorised spare parts or accessories.

For safety reasons, invasive work on the device as well as arbitrary repairs, conversions and modifications to the device are strictly forbidden; the manufacturer shall accept no liability for damages resulting from such invasive work, arbitrary repairs, conversions and/or modifications to the device.

2. Product description

2.1 Ordering code
This operating instructions manual applies to the following types:

<table>
<thead>
<tr>
<th>AZM 170</th>
<th>Order code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>SK</td>
<td>Cut clamps</td>
</tr>
<tr>
<td>11</td>
<td>02</td>
<td>Screw connection</td>
</tr>
<tr>
<td>R</td>
<td>Latching force 5 N</td>
<td></td>
</tr>
<tr>
<td>A</td>
<td>Latching force 30 N</td>
<td></td>
</tr>
<tr>
<td>ST</td>
<td>Cable gland</td>
<td></td>
</tr>
<tr>
<td>ST-2431</td>
<td>M12 x 1 connector</td>
<td></td>
</tr>
<tr>
<td>24 VAC/DC</td>
<td>U, 24 VAC / DC</td>
<td></td>
</tr>
<tr>
<td>110 VAC</td>
<td>U, 110 VAC</td>

</tr>
<tr>
<td>2405</td>
<td>Emergency exit</td>
<td></td>
</tr>
</tbody>
</table>

Only if the information described in this operating instructions manual are realised correctly, the safety function and therefore the compliance with the Machinery Directive is maintained.

2.2 Special versions
For special versions, which are not listed in the order code below 2.1, these specifications apply accordingly, provided that they correspond to the standard version.

2.3 Purpose
The solenoid interlock has been designed to prevent in conjunction with the control part of a machine, movable safety guards from being opened before hazardous conditions have been eliminated.

The safety switchgears are classified according to ISO 14119 as type 2 interlocking devices.

2.4 Technical data

| Standards: | IEC 60947-5-1, ISO 14119, BG-GS-ET-19 |
| Enclosure: | glass-fibre reinforced thermoplastic, self-extinguishing |
| Actuator and locking bolt: | stainless steel 1.4301 |
| Contact material: | Silver |
| Holding force F: | 1000 N |
| Latching force: | 5 N |
| - Ordering suffix R: | 30 N |
| Coding level according to ISO 14119: | low |
| Protection class: | IP67 |
| Ambient temperature: | –25 °C ... +60 °C |
| Mechanical lifetime: | > 1 million operations |
| Actuating speed: | max. 2 m/s |
| Actuating frequency: | max. 1000 operations/h |
| Contact type: | change-over contact with double break, type Zb or 2 NC contacts, with galvanically separated contact bridges |
| Switching system: | IEC 60947-5-1; slow action, NC contact with positive break |
| Positive break travel: | 11 mm |
| Positive break force: | 8.5 N for each NC contact fitted |

Manual release
A manual release is available as a mounting tool and in the event of a power failure in case the power to unlock principle is used. If the triangular key is turned 180°, the locking bolt is pulled into the unlocking position. Please ensure that jamming by external influence on the actuator is avoided. The normal locking function is only restored after the triangular key has been returned to its original position. After being put into operation, the manual release must be secured by installing the sealing plug, which is included in delivery.

Manuai release from side
Ordering suffix -2197 or ST

Triangular key TK-M5 (101100887) available as accessory.

Emergency exit
Fitting and actuation only from within the hazardous area.
To activate the emergency exit, turn the red lever in the direction of the arrow to the end stop. Please ensure that jamming by external influence on the actuator is avoided.

The user must evaluate and design the safety chain in accordance with the relevant standards and the required safety level.

The entire concept of the control system, in which the safety component is integrated, must be validated to the relevant standards.
Operating instructions
Solenoid interlock
AZM 170

Cable entry: M20 x 1.5
Connection: Cut clamps, screw terminals or M12 connector

Cable type: flexible
Cable section:
- Cut clamps: 0.75 ... 1.0 mm²
- Screw terminals: 0.25 ... 1.5 mm²
  (incl. insulated conductor ferrules)

Electrical data:
Utilisation category: AC-15, DC-13
Rated operating current/voltage Iₑ/Uₑ:
  4 A / 230 VAC;
  4 A / 24 VDC
Rated impulse withstand voltage U_imp:
  4 kV
Rated insulation voltage Uᵢ:
  250 V
Max. fuse rating:
  6 A
Required rated short-circuit current:
  1000 A
Rated control voltage Uₛ:
  24 VAC / DC;
  110 VAC 50 / 60 Hz;
  230 VAC 50 / 60 Hz

Electrical data – Magnet control:
Magnet: 100% ED
Power consumption: max. 12 W
Accepted test pulse duration on input signal: ≤ 5.0 ms
- With test pulse interval of: ≥ 50 ms

2.5 Safety classification
Standards: ISO 13849-1
Envisaged structure:
- Basically: applicable up to Cat. 1 / PL c
- With 2-channel usage and fault exclusion mechanism*: applicable up to Cat. 3 / PL d with suitable logic unit
B₁₀₀ NC contact: 2,000,000
B₁₀₀ NO contact at 10% ohmic contact load: 1,000,000
Service life: 20 years

* If a fault exclusion to the 1-channel mechanics is authorised.

MTTF₀ = \frac{B₁₀₀}{0.1 \times n_{nop}} \times \frac{n_{nop} \times d_{D} \times h_{D} \times 3600 \text{ s/h}}{t_{cycle}}

(Determined values can vary depending on the application-specific parameters n_{nop}, d_{D}, h_{D} and t_{cycle} as well as the load.)

If multiple safety components are wired in series, the Performance Level to ISO 13849-1 will be reduced due to the restricted error detection under certain circumstances.

2.6 Safety classification of solenoid interlock function
If the device is used as an interlock for personal safety, a safety classification for the solenoid interlock function is required.

The following safety classification is based on the principle of isolating the supply of power to the solenoid.

⚠️ The classification of the interlock function is only valid for devices with monitored interlock function and in the quiescent current version (see type code).

By reliably isolating the power externally, it can be assumed that no errors can occur with regard to actuation of the solenoid interlock function. In this case, the device does not contribute towards failure probability of the interlock function.

The level of safety of the interlock function therefore relies exclusively on reliable deactivation of the power externally.

Safety classification of solenoid interlock function

Safety power shutdown

Guard locking function

To simplify safety classification of the interlock function, the following parameters can be assumed for the device:

- PL: e
- PFH: ≤ 1.00 x 10⁻⁹ / h
- SIL: suitable for SIL 3 applications
- Service life: 20 years

⚠️ Fault exclusion with regard to wiring routing must be observed.

⚠️ If for a certain application the quiescent current version of a solenoid interlock cannot be used, for this exception an interlock with power to lock can be used if additional safety measure need to be realised that have an equivalent safety level.
3. Mounting

3.1 General mounting instructions
Two mounting holes are provided for fixing the enclosure. The solenoid interlock is double insulated. The use of an earth wire is not authorised. The solenoid interlock must not be used as an end stop. Any mounting position. The mounting position must be chosen so as to avoid the penetration of dirt in the used holes. The unused opening must be sealed by means of slot sealing plugs. Tightening force for the Torx T10 cover screws 0.7 ... 1 Nm.

Please observe the relevant requirements of the standards ISO 12100, ISO 14119 and ISO 14120.

The safety component and the actuator must be permanently fitted to the safety guards and protected against displacement by suitable measures (tamperproof screws, gluing, drilling, pinning).

3.2 Dimensions
All measurements in mm.

AZM 170 with cut clamps and cable entry

AZM 170SK with screw terminals and cable entry

AZM 170...-ST with connector, A- or B-coding

4. Rear side Electrical connection

4.1 General information for electrical connection

The electrical connection may only be carried out by authorised personnel in a de-energised condition.

If the risk analysis indicates the use of a monitored interlock they are to be connected in the safety circuit with the contacts indicated with the symbol  .

For the cable entry, suitable cable glands with an appropriate degree of protection must be used.

Cut clamp terminals
The IDC method of termination (cut clamp technology) enables connecting flexible wires with cable section 0.75 ... 1 mm² without using conductor ferrules. To this effect, strip the wire according to the drawing (refer to the wiring example) and insert it into the cable gland, close the cable gland, push the conductors in the groove of the cover (refer to wiring example) and screw the cover back. Observe that the individual conductors remain in position to avoid jamming.

Screw terminals (SK version)
Unscrew the cover of the enclosure. Connect the cables to the terminal block. Use insulated conductor ferrules to that effect. Screw the cover back on the enclosure.
4.2 Contact variants
Contacts shown in a de-energised condition and with the actuator inserted.

5. Set-up and maintenance

5.1 Functional testing
The safety function of the safety components must be tested.
The following conditions must be previously checked and met:
1. Fitting of the solenoid interlock and the actuator
2. Check the integrity of the cable entry and connections
3. Check the switch enclosure for damage

5.2 Maintenance
A regular visual inspection and functional test, including the following steps, is recommended:
1. Check for tight installation of the actuator and the switch
2. Remove particles of dust and soiling
3. Check cable entry and connections

Adequate measures must be taken to ensure protection against tampering either to prevent tampering of the safety guard, for instance by means of replacement actuators.

Damaged or defective components must be replaced.

6. Disassembly and disposal

6.1 Disassembly
The safety switchgear must be disassembled in a de-energised condition only.

6.2 Disposal
The safety switchgear must be disposed of in an appropriate manner in accordance with the national prescriptions and legislations.
7. EU Declaration of conformity

EU Declaration of conformity

K.A. Schmersal GmbH & Co. KG
Möddinghofe 30
42279 Wuppertal
Germany
Internet: www.schmersal.com

We hereby certify that the hereafter described components both in their basic design and construction conform to the applicable European Directives.

Name of the component: AZM 170

Type: See ordering code

Description of the component: Interlocking device with electromagnetic interlock for safety functions

Relevant Directives:
- Machinery Directive 2006/42/EC
- EMC-Directive 2004/108/EC
- RoHS-Directive 2011/65/EU

Applied standards:
- DIN EN 60947-5-1:2010
- DIN EN ISO 14119:2014
